DEFINITIONS

connectHome® Remote Services

- Access full functionality of your system status anytime anywhere with award winning mobile apps for Android and Apple.
- View or change alarm status—e.g. arm or disarm
- Receive event alerts via email and/or text instantly. Have events such as alarm status, and doors, windows, cabinets being opened or closed and sent automatically to your computer and/or mobile devices via email and/or text message
- Attach a wireless sensor to any door or window in your home, and set alert rules specific to your security needs and your lifestyle.

Camera

- Email alerts with video clips based upon events, schedules and detected motion.
- Live video streaming via PC or award-winning mobile app
- Plug and Play installation
- 100 MB Video clip storage

Automation

- Supports management of home automation devices. The device must be Z-Wave. Devices supported include thermostats, door locks, lighting controls. (GVTC does not install these devices.) Only devices we will stock and ship are cameras and thermostats.
- Enter your home and have the temperature set perfectly for your arrival? Have the lights go up as the sun goes down? Unlock a door via your smartphone? You bet! GVTC can help you bring your home to life with a customized solution that can work with your lifestyle and budget and grow with your changing needs. Make the most of your home by taking control.

- Creating scenes and schedules can enhance your lifestyle and help you save money and energy without any change in your daily routine. A "Goodnight" scene could entail having the doors lock and the lights shut off when you arm your security system at night. A schedule might be created to have the porch and hallway lights on and the thermostat set to a specific temperature an hour before you leave the office so you arrive to a comfortable, well-lit home.
